From Wikipedia, the free encyclopedia

*"WP:WBE" redirects here. For instructions on how to enforce a wikibreak, see Wikipedia:WikiProject User scripts/Scripts/WikiBreak Enforcer.*

This is a **list of Wikipedians ordered by number of edits** in the English-language Wikipedia. Edits in all namespaces (Article, Talk, User, User Talk, Template, Template talk, Help, etc.) are counted. Some types of edits that may be included in certain page count tools, such as page moves, are not captured by the counting method employed to compile this list. Thus, there may be a significant disparity seen between the counts listed below when compared with other counting methods. This page includes the top 5,000 contributors, and the next 5,000 are listed here.

This list is normally updated daily. Click Special:Preferences or the "Preferences" link of the Wikipedia page menu to see your most accurate and recent edit count.

## Purpose of this list

Visitors to this page may well ask themselves, "Why does this list exist? What is the value of organizing editors by number of edits (especially in light of the *Caveat lector* section below)? Aren't all editors considered equal in the eyes of Wikipedia regardless of how many edits they may have made? Does having a record of a large number of edits entitle a person to some special rights or privileges? Does *not* appearing anywhere on this list mean that my own contributions aren't valuable or important? Should it be the goal of any individual editor to accrue as many of these counted edits as possible in hopes of making it onto or increasing his or her ranking on the list?"

These are all fair questions. Having a user account with a large number of edits implies that the user is knowledgeable, experienced, knows what s/he is doing, is familiar with Wikipedia policies and procedures, has a handle on most of Wikipedia's acronyms and abbreviations, understands the difference between things like a template and a tag, a meatpuppet and a sockpuppet, and can direct other editors on the correct format and venues to express their concerns or problems. New articles created by high edit count editors may not face the same scrutiny or be as likely to be nominated for deletion as those created by newcomers. None of this is because of the edit counts themselves, but because high edit counts is a reasonable indicator of higher experience.

Should it become your goal to get your own account on this list, or to increase your ranking on it? If that means you are willing to contribute your time and energy to creating a better online encyclopedia, then absolutely! But Wikipedia is not a game and no one who is serious about editing is focused on how many "experience points" he or she is accruing along the way. Even editors whose high edit counts are partly the result of a series of automated edits had to learn how to perform that automation. We all learn as we go, and if we are here for the right reasons, then our edit counts are only interesting commentary on our participation—not on the quality or value of it! This is not a race, it is a collaborative project, and it can always use more level-headed collaborators willing to learn how it all works.

## *Caveat lector*

Let the reader beware: this list is a reference summary only. It should be taken with a large grain of salt and not viewed as a definitive measure of any individual editor's worth. There are many reasons why a total number of edits usually does not indicate quality of work, quality of an editor, or significance of contributions. Here are some of the most obvious:

1. Due to a bug, the edit counts reported by Wikipedia are not always reliable for editors with high edit counts and may show extreme discrepancies in some cases.
2. Some editors have chosen to take advantage of some of Wikipedia's *automated tools* (e.g., bots and assisted systems) which are capable of fixing many simple errors per minute (spelling, links, etc.), or that place many informational and other notices on a series of articles or talk pages in a short time, while other editors work on tasks where such tools are not useful such as content creation and reworking, manual copyright review, and editorial dispute resolution. A simple edit count does not differentiate between these types of edits.
3. Some "bot" users (users who have created or edited or take advantage of some of Wikipedia's automated "robot" tasks) route their bot edits through *separate bot accounts* while others include them in their own edits. This means that some editors may appear to have comparatively low edit counts in multiple accounts but would be able to show a much higher *overall* edit count if the edits from all the accounts were to be included. The following table does not differentiate between these types of accounts, and this fact should be kept in mind when viewing them. If you wish to find out more information about an editor's contribution history, you need only click on the "History" tab of any article or talk page to which he or she has made a contribution and then click on the "contribs" link that appears in blue font next to that person's username to see a full list of every contribution that editor has ever made, back to the very first one (likewise, other editors may always view your own edit history the same way).
4. Others may use one or more *alternative accounts* to segregate their contributions for various legitimate reasons. Again, the edit counter will record edits from these as separate accounts, which may then appear to be misleadingly low.
5. Many editors who are high on the list perform *routine tasks that require less time per edit* especially by reverting other editors, requesting article protection, warning users, or WP:SPAM; conversely, users who create a number of long new pages or make major additions might easily spend a week or more undertaking research before editing, and appear much lower on the list, if at all. This is another reason why the edit counts may not reflect actual experience or degree of contribution of a given editor.
6. Some editors use the *Show preview* button until they are satisfied with a particular (possibly very long) edit, while others will habitually save a succession of small changes as they go; a third class may
